

Aster — Cockpit consolidé de recherche

Dashboard converti et redessiné le 2026-09-21 — recherche-only, pas un signal de trading — généré 2026-09-21T20:46:46Z UTC

Rapport consolide Aster

Generation: 2026-06-03T14:36:35.151170+00:00. Ce rapport consolide les CSV Aster sans relancer de trade ni backtest live. Il sert a prioriser les lanes, pas a autoriser du trading reel.

Meilleure lane actuelle

LABUSDT 30m ROI 50.69% | WR 0.66 | PF 2.79

Discovery rows

13590

Reality rows

111

Combined rows

13701

Top lanes

50

Ou on en est

Le projet Aster a change de nature: on n'est plus dans une simple chasse au meilleur ROI. On a maintenant un pipeline de recherche qui conserve les anciens champions, explore de nouveaux actifs, puis ajoute progressivement les contraintes reelles d'Aster.

Phase

validation_realism_before_next_strategy_expansion

On ne cherche pas juste plus de ROI: on verifie d'abord si les ROI sont executables.

Conclusion

les meilleurs ROI existent, mais ils doivent rester sous garde-fous exchangeInfo, WS, mark/index, funding et sessions

Les champions existent, mais les garde-fous decident de leur valeur reelle.

ExchangeInfo

wired_but_legacy_rows_need_rerun | historique 7313/13701

Le code est branche; les grands CSV historiques doivent etre relances pour remplir ces colonnes.

WS / Forward

ready 9 | watch 4 | risky 8

Le WS sert a separer les lanes exploitables des lanes purement historiques.

Mark/Index

confirmed 8 | watch 2031 | rejected 916

On evite les lanes dont le last price diverge trop du mark/index.

Decision

promote_only_lanes_that_survive_reality_filters_and_forward_monitoring

Promouvoir seulement ce qui survit aux filtres, pas ce qui a juste un joli backtest.

Ce qui a vraiment avance

Avant: les backtests etaient surtout des replays kline avec frais approximatifs. Maintenant: les nouveaux CSV V2 portent les frais officiels, le funding public, la qualite WS, les controles mark/index et les contraintes exchangeInfo comme marketTakeBound, PERCENT_PRICE, tickSize, stepSize et minNotional.

La consequence est importante: une lane rentable n'est plus automatiquement interessante. Elle doit etre classée selon son statut de realisme: exploitable, watch, a revalider, ou recherche seulement.

Top lanes consolidees

Aster v2 runner plan & preflight

Snapshot: loaded | ready 13 | needs WS 8 | needs universe refresh 0 | blocked 0 | runnable 21

Cette section montre si le nouveau runner utilise vraiment l'univers Aster et la qualite WS. Le plan v2 melange maintenant champions historiques, review, crypto liquide, commodities et equities. Un symbole needs_ws_validation peut etre backteste en exploration, mais il n'est pas encore propre pour du forward strict.

Buckets exploration

Bucket	Count	Symboles
commodities	4.00	XAUUSDT, XAGUSDT, CLUSDT, BZUSDT
crypto_universe	8.00	ASTERUSDT, BTCUSDT, BNBUSDT, ETHUSDT, HYPEUSDT, ETHUSD1, SOLUSDT, SOLUSD1
equities	4.00	NVDAUSDT, METAUSDT, DRAMUSDT, AMDUSDT
priority_watchlist	7.00	BTCUSDT, ASTERUSDT, HYPEUSDT, BNBUSDT, ETHUSDT, ETHUSD1, SOLUSDT

Preflight symboles

Aster v2 strict vs large

Snapshot: blocked_missing_both_csv | strict rows 0 | large rows 0 | common lanes 0 | strict improved 0 | strict degraded 0

Cette section compare le runner strict filtre WS/universe contre le runner large exploration. Si le statut indique blocked_missing_strict_csv, il faut laisser le terminal strict finir au moins un cycle.

Strict ameliore

Symbole	Strict ROI	Large ROI	Delta ROI	Strict PF	Large PF	Delta score	Strict TF	Large TF
Aucune donnee.								

Strict degrade

Symbole	Strict ROI	Large ROI	Delta ROI	Strict PF	Large PF	Delta score	Strict TF	Large TF
Aucune donnee.								

Large non strict-ready

Symbole	Large ROI	Large PF	Large WR	Preflight	WS	WS score	Warnings
Aucune donnee.							

Runner health dashboard

Snapshot: loaded | expected 4 | with CSV 0 | missing 4 | active heartbeat 4

Cette section repond a la question simple: est-ce que les terminaux lancés ecrivent vraiment leurs fichiers attendus ? Si un tag est missing_csv, le cycle n'a pas encore fini ou le terminal a ete lance avec un autre output-tag.

Tag	Health	Phase	Progress	CSV	Rows	Last write	Last progress	Best

Methode

Score interne: $\text{roi} \times 10 + \text{capped_pf} \times 3 + \text{win_rate} \times 12 + \text{capped_closed_trades} + \text{quality} \times 0.35 - \text{drawdown} \times 0.2$

Depuis le 2026-05-31, les nouveaux CSV discovery v2 integrent le funding public Aster par symbole via /fapi/v3/fundingRate: colonnes funding_source, funding_status, funding_avg_bps_per_8h et funding_cost_usd_estimate. Si Aster rate-limit ou bloque, le fallback proxy reste visible au lieu d'etre silencieux.

Les nouveaux replays discovery utilisent aussi les frais taker officiels par symbole quand aucun override n'est fourni: USDT=4 bps, USD1=0.5 bps. Les anciens CSV generes avec l'ancien proxy 6 bps restent conserves mais doivent etre lus comme historiques.

La priorite WebSocket est maintenant branchee au workflow: le runner v2 peut rafraichir le preflight WS avant de construire son univers, et les nouveaux CSV v2 exposent ws_quality_verdict, ws_quality_score, ws_spread_bps, ws_latency_ms et les risques/warnings WS. Une lane rentable mais ws_forward_risky doit rester en recherche, pas en forward paper prioritaire.

L'audit officiel Aster ajoute une prochaine validation importante: les meilleurs backtests kline 60j devront etre repasses sur aggTrades/historicalTrades pour verifier la microstructure. Les endpoints user stream, strategy

orders, chase/BBO et MMP restent documentes mais bloques tant qu'aucune policy credentials read-only/testnet n'existe.

Separation stricte a garder: le fallback Spot V3 n'a ni funding, ni liquidation, ni leverage; une lane rentable via spot doit etre analysee comme market_type=spot. Les stock perps/equities doivent rester needs_session_filter tant que les horaires New York, off-hours et jours feries ne sont pas modelises.

Le modele perps est plus realiste qu'au depart, mais pas encore complet: Aster documente l'open_loss dans le cout d'ouverture et l'ADL via quantile utilisateur. Ces deux risques doivent rester visibles comme limitations sur les lanes a levier eleve.

Donnees Aster encore utiles a brancher plus tard: !bookTicker pour le spread all-symbol en WebSocket, !forceOrder@arr pour les regimes de liquidation, et les champs publics fundingInfo/indexreferences comme risques explicites. Les produits Shield et 1001x restent separes du moteur Aster Pro perps.

Les marches macro ne doivent pas etre lus comme crypto 24/7: forex Shield a des fermetures weekend/UTC, stocks ont les sessions New York, et XAU/XAG peuvent fermer pendant les jours feries US. Les lanes macro/equities restent donc needs_session_model jusqu'a implementation d'un filtre horaire.

Smoke public supplementaire: /ticker/bookTicker sans symbole retourne 448 lignes, /fundingInfo sans symbole retourne 602 lignes, et /indexreferences?symbol=BTCUSDT retourne 8 references. Les trades historiques/aggTrades excluent insurance fund et ADL: la microstructure future restera orderbook-only.

RPC/Aster Code existent aussi: tapi.asterdex.com/info peut lire balance/open orders/fills par adresse mais reste privacy-aware, et Aster Code gere Agent/API Wallet + Builder. Ces surfaces sont utiles pour une future verification de notre propre wallet, pas pour enrichir les backtests de marche.

Deposit/withdraw public assets ont ete probes: BNB Chain/EVM/spot retourne 53 assets deposit et 53 assets withdraw, avec fee estimate ASTER disponible. C'est utile pour wallet setup uniquement; les endpoints signes de retrait/transfert restent exclus.

exchangeInfo public a ete probe: 453 symboles, tous avec PRICE_FILTER, LOT_SIZE, MARKET_LOT_SIZE, MIN_NOTIONAL et PERCENT_PRICE. Les bornes varient fortement: LABUSDT/WIFUSDT ont marketTakeBound=0.10, alors que INTCUSDT/MSFTUSDT/CRCLUSDT sont a 0.02. Les nouveaux CSV V2 exposent maintenant ces bornes avec exchange_filter_verdict, warnings et blockers.

Derniere passe documentaire: exchangeInfo expose aussi 33 assets de marge et des rate limits publics (REQUEST_WEIGHT=2400/min, ORDERS=1200/min, ORDERS=300/10s). Les endpoints signes restants (income, leverageBracket, adlQuantile, commissionRate, MMP, strategy orders, sub-account, migrate assets) sont maintenant classes comme future policy read-only/testnet, pas comme data manquante pour backtest public.

Les error codes Futures V3 ajoutent des flags operationnels importants: NO_TRADING_WINDOW pour equities/macro, MAX_LEVERAGE_RATIO pour lanes x10/x20, rejets tick/step/min-notional, et timeouts avec statut inconnu. Les changelogs recents documentent aussi STP, OTO/OCO/OTOCO et Aster Chain, mais ces surfaces restent hors execution actuelle.

Garde-fou: ces resultats restent du backtest/paper trading. Aucun ordre reel, aucun wallet, aucun signal client.
