

Aster — Cockpit consolidé de recherche

Dashboard current en PDF le 2026-05-21 — recherche only, pas en signal & trading

Rapport consolidé Aster

Backtests, reality check et runners H24

Generation: 2026-06-03T14:36:35.151170-00:00. Ce rapport consolidé les CSV Aster sans relancer de trade ni backtest live. Il sert à prioriser les lanes, pas à autoriser du trading réel.

Metteure lane actuelle

LABUSDOT 30m
ROI 50.69% | WR 0.66 | PF 2.79

Cancelled rows13701
Top lanes50

On en est

Le projet Aster a charge de nature: on n'est plus dans une simple chasse au meilleur ROI. On a maintenant un pipeline de recherche qui conserve les anciens champions, explore de nouveaux actifs, puis ajoute progressivement les contraintes réelles d'Aster.

Phase

validation_realism_before_next_strategy_expansion

On se cherche pas juste par de ROI: on vérifie d'abord si les ROI sont exécutables.

Conclusion

les meilleurs ROI existent, mais ils doivent rester sous garde-fous échange/Info, WS, mark/index, funding et sessions

Les champions existent, mais les garde-fous décident de leur valeur réelle.

Exchange/Info

wired_bot_legacy_rows_need_jaran | historique 7313/13701

Le site se branche: les grands CSV historiques doivent être reliés pour remplir ces colonnes.

WS / Forward

ready 9 | watch 4 | risky 8

Le WS sert à séparer les lanes exploitables des lanes purement historiques.

Mark/Index

confirmed 8 | watch 21 | rejected 916

On évite les lanes dont le bid ou l'ask dépasse trop du mark/index.

Décision

promote_only_lanes_that_survive_reality_filters_and_forward_monitoring

Promouvoir seulement ce qui survit aux filtres, pas ce qui a juste un bon backtest.

Ce qui a vraiment avancé

Avant: les backtests étaient surtout des replays klime avec frais approximatifs. Maintenant: les nouveaux CSV V2 portent les frais officiels, le funding public, la qualité WS, les controles mark/index et les contraintes échange/Info comme marketTakebound, PERCENT_PRICE, tickSize, stepSize et minNotional).

La conséquence est importante: une lane rentable n'est plus automatiquement intéressante. Elle doit être classée selon son statut de réalisme: exploitable, watch, à révalider, ou recherche seulement.
